It is the goal of this design to provide the city of Oakridge with a long-term, conceptual master plan for their parks system. This plan is comprised of the four existing parks (Osprey, Diamond View, Salmon Creek, Greenwaters) and a series of new conceptual parks and bike/ped pathways. It serves as the foundation for the city’s parks system and the overall park system.

The design is divided into two parts: Salmon Creek and Greenwaters. While both parks will remain as two distinct parks, they are connected by the redesign of the park system. This connection is achieved through the redesign of the park’s character, while leaving intact the existing features of the parks.

CONCEPTUAL PARKS AND GREENWAYS

1. **Osprey Park**
   - Located north of the highway.
   - Features include grass areas, natural areas, and a small parking lot.
   - The park's design is focused on providing a natural habitat for local wildlife.

2. **Diamond View Park**
   - Located west of the highway.
   - Features include a pedestrian bridge to access the park.
   - The park's design is focused on providing a green space for the local community.

3. **Salmon Creek Park**
   - Located south of the highway.
   - Features include a pedestrian bridge to access the park.
   - The park's design is focused on providing a natural habitat for local wildlife.

4. **Greenwaters Park**
   - Located east of the highway.
   - Features include a pedestrian bridge to access the park.
   - The park's design is focused on providing a green space for the local community.

The design also identifies the sand and gravel quarry just south of the highway as an area of extreme environmental value. If this land could be acquired by the city it could serve as a leading restoration and subsequent park or wildlife preserve project.
